RISHAB YEKALDEVI

Freshman Aerospace Engineer @ San José State University

• **San José, CA** • **rishab.yekaldevi@sjsu.edu** • **+1 (341) - 758 - 0431** • **linkedin.com/in/rishabyk**

EDUCATION

San José State University | B.S. Aerospace Engineering August 2026 - Present

College of Alameda | A.S. Mathematics, A.A.-T Economics & CAL-GETC July 2022 - June 2026

- *Earned concurrently with high school diploma via Peralta CCD dual enrollment (3.75 GPA+, Highest Honors).*

Alameda Science & Technology Institute | High School Diploma July 2022 - June 2026

- Highest Honors all 4 years (3.80 GPA+)

KEY SKILLS

Engineering: SolidWorks, Fusion, Onshape, MATLAB, OpenRocket
Manufacturing: 3D Printing (Cura, PrusaSlicer, Bambu Studio), Soldering, Machining, Circuit Design, Hand/Power Tools
Software: Java, Kotlin

EXPERIENCE

High Altitude Rocket Project (HARP) | Aerodynamics Team August 2026 - Present

San José State University

Selected for an exclusive 10-person research and engineering team to design and fabricate a multi-stage rocket aiming for the Kármán line.

Formula SAE (FSAE) | Aerodynamics Team August 2026 - Present

San José State University

Collaborate with the aerodynamics subteam to design, test, and manufacture aero packages for a highly competitive formula-style race car.

Team 4186 Alameda Aztechs | Mechanical & Programming Lead January 2022 - June 2026

FIRST Robotics Championship

- Spearheaded the transition from a Kotlin H-drive to a Java command-based Swerve drive, completely segmenting individual subsystems to create the team's most successful robot in 13 years.
- Engineered and CADed a completely unique wave drive actuator system in Onshape to vertically compact motors, winning a prestigious engineering award.
- Helped lead the team to 2nd place overall out of 60+ teams as San Francisco Regional Finalists by bridging mechanical hardware with autonomous software routines.
- Pioneered documentation standards for software architecture and taught Onshape to incoming programmers to improve cross-functional team communication.

PROJECTS

Level 1 (L1) High-Power Rocketry Certification September 2026 - Present

San José State University

Designing and fabricating a custom high-power rocket to achieve L1 certification, utilizing OpenRocket to accurately simulate aerodynamic forces, flight stability, and target apogee.

Tracked Autonomous UAV | Project Lead | ASTI January 2025 - June 2025

- Designed a modular, multi-purpose tracked chassis using parametric modeling in Onshape, presenting the CAD model to the club advisor to secure a $500 project sponsorship, 6kg of filament, and electronic components.
- Directed a 7-person team through the full product lifecycle, from 3D printing and circuit assembly to integrating a custom motorized turret intended for community use.

Custom FPV Drone & STEM Leadership | ASTI August 2025 - June 2026

- Founded ASTI's first FPV Club (serving as Vice President of STEM Club), designing, building, and programming a custom drone from scratch to serve as the baseline curriculum.
- Mentored students across campus through hands-on workshops, teaching advanced manufacturing techniques (3D printing, circuit assembly, sublimation) to support diverse, student-led STEM projects.
